## Acknowledgements

After 9 months of research as a Master student in the Materials Science group followed by 4 years of research as a PhD student and currently a short appointment as postdoctoral researcher, I am glad to feel that the Materials Science group of the Department of Applied Physics of the Zernike Institute for Advanced Materials has become my second home. I take this opportunity to express my gratitude and thanks to our group and to everybody in my surrounding who has supported me during my entire academic education.

My first thoughts go to my thesis supervisor and first promotor Prof. dr. Jeff Th. M. De Hosson, who I would like to thank for introducing me to the field of nanoporous metals and giving me the opportunity to carry out my PhD research in the Materials Science group. Thank you also for the inspirational discussions and scientific guidance and providing me with necessary equipment and materials; for giving me the opportunity to attend international activities in Europe, Asia and America. I would also like to underline that I appreciate the freedom you gave me during my work by allowing me to not stick to our original research goal (i.e. actuation in nanoporous metals). Thank to this freedom, I was able to satisfy my scientific curiosity by carrying out side experiments and this has given rise to nice results such as the porous metallic nanoparticles on the cover of this thesis and the preliminary results in the outlook (*chapter 7*), which deals with the optical properties of nanoporous gold.

My thoughts also go to my second supervisor and promotor Prof. dr. ir. P. R. Onck, who I would like thank for his supervision. Beside our regular discussions every first Wednesday of the month in the context of our joint ZiAM meeting, you were always ready to discuss with me each time that I suddenly came to your office. Having a new experimental result is good, but such a result should be supported by an appropriate theoretical model; your contribution in this context was very useful as depicted by the buckling model used in chapter 5 to explain the large actuation strains measured in our layered nanoporous gold structures. I would also like to thank you for the good coordination of the ZiAM Nanofoams meetings.

I would like to acknowledge the conjoint financial support of the Netherlands Organisation for Scientific Research (NWO) via the Mosaic grant (Mozaïek 2008 BOO Dossiernr: 017.005.026) and the Zernike Institute for Advanced Materials. Many thanks to Dr. H. Jordens for his suggestion and motivation to apply for the mosaic grant; Dr. A. J. Schilstra for his recommendation during the grant application.

I would like to thank the members of the reading committee: Prof. dr. G. ten Brinke, Prof. dr. H. A. de Raedt and Prof. dr. K. Loos for reviewing my thesis and for their comments and suggestions during the ZiAM Nanofoms meetings.

Special thanks to Siva Saane, Ivana Vuković, Alex Zinchenko and Sergey Punzhin for your contributions during our monthly ZiAM nanofoams meetings. Your motivations and enthusiasms were very inspiring.

I am thankful to: Dr. P. M. Bronsveld for his regular assistance during the synthesis of our alloy precursors using the electric arc furnace, for the study of the phase diagrams of our binary and ternary alloy precursors, for x-ray diffraction measurements and analysis; Dr. Willem-Pier Vellinga for his interest, suggestions and the regular discussions; Dr. ZhenGuo Chen for his suggestions and recommendations with respect to the chemical dealloying procedure; Dr. Z. Vuković in Belgrade Serbia, for the measurement of the BET specific surface areas of our nanoporous gold and nanoporous silver samples; Elly Eekhof for her administrative support and the nice talks.

I would like to acknowledge Dr. JianCun Rao for TEM data collection and analysis; Dr. David Vainchtein for his suggestions and the regular discussions; Dr. Vasek Ocelík for his assistance on the electron microscopes and the computers software, many thanks for your assistance on EBSD; Mikhail Dutka for his technical assistance in the lab; Professor P. Rudolf for giving me access to her lab; Dr. I. V. Melián-Cabrera for the thermogravimetric analysis (*chapter 5 -Part 2*) ; Professor D. G. Stavenga for giving access to his optical measurement instruments and for the discussions, H. L. Leertouwer and B. D. Wilts for the optical measurements on the microspectrophotometer (*chapter 7*); Dr. Redmer van Tijum for his

suggestions regarding the modeling of nanofoam using Comsol Multiphysics Finite Element Analysis Simulation Software (*chapter 3*); Dr. Wesley Browne for helping me to solve potentiostat issues; Gert-Jan Wetzelaer for the discussions.

I am very grateful to the students who have assisted me to achieve the results presented in this thesis, namely Mannold van der Schootbrugge for his contribution as a Master student in the context of his Master thesis, to tailor the microstructure of nanoporous gold using the dealloying potential and to investigate the sensor properties of nanoporous gold cantilevers. Part of his work is published in *Scripta Materialia* 64, 319-322 (2011). Menno Eekma for his contribution as a Master student in the context of his Master thesis, to investigate the elastic modulus mapping of nanoporous gold using Atomic Force Microscopy (AFM) in PeakForce imaging mode. Part of his results is published in *ACS Nano* 6, 3734-3744 (2012). Leo de Jeer (*Ongoing research*) for his contribution as a Master student in the context of his Master thesis, to experimentally investigate a new approach for energy harvesting based on nanoporous metals. Edwin de Jong for his contribution as a Bachelor student in the context of his Bachelor thesis, to investigate the specific surface area of disordered nanoporous materials. An analytical expression for a direct estimation of the specific surface area of nanoporous materials was derived. Part of Edwin's work is published in *Acta Materialia* 59, 7488-7497 (2011). Mart Salverda (*Ongoing research*) for his contribution as a Bachelor student in the context of his Bachelor thesis, to theoretically investigate a new approach for energy harvesting based on a nanoporous metals. Eric De Vries for his contribution as a Bachelor student in the context of his Bachelor project (FIT-Stage), to investigate the respond time of nanoporous metal actuators. Steven Folkersma for his contribution as a Bachelor student in the context of his Bachelor project (FIT-Stage), to convert the C++ MINKO2 script into Matlab code and use that program to investigate the Minkowski functionals in nanoporous metals. Mart Salverda for his contribution as a Bachelor student in the context of his Bachelor project (FIT-Stage) to experimentally investigate the localized surface plasmon resonance in nanoporous gold films. Part of his work is found in chapter 7.

I extend my gratitude to my paranymphs, Catalina Mansilla-Sanchez and Sergey Punzhin for assisting me with the preparation of my defense ceremony, reception and party.

I thank all the rest of my current and former PhD students and postdoc colleagues including Emiel Amsterdam, Alessio Morelli, Sriram Venkatesan, Gopi Krishnan, Diego Martinez-Martinez, Anatoly Turkin, Jasper Oosthoek, Enne Faber, Ismail Hemmati, Jozef Vincenc Obona, Oleksii Kuzmin, Ivan Furár, Peter van Zwol, Kalpak Shaha, Xuan Lam Bui, Tony Kazantzis, Chang Qiang, Yutao Pei, Ferry Wieland, Huajie Yang, Willem van Dorp, Jintao Shen, for the enjoyable discussions and social activities. I also thank Marc Sánchez Sellès and Ionela Gavrila who started recently to work with me on nanoporous metal/polymers composite materials.

Special thanks to my former classmates 2004: Hans van der Veen and Gert Eising for their interests, discussions and technical suggestions. I would also like to thank the student association for applied physics T.F.V. Francken that I joined in 2004, for the various activities including foreign excursions to England, Portugal, Japan and South-Korea, for the social events: *filmavond*, *BBQ*, *interfacultaire bierestafette*, *en introkamp voor eerste jaars*. I would particularly like to thank some T.F.V. Francken members for the enjoyable moments in the Francken Kamer during the past 8 years: Gerbert (*voorzitter 2004*), Sander Onur, Sander Boonstra, Tom Boot, Gert, Rudy (*voorzitter 2006*), Mark(*voorzitter 2007*), Bas, Erik, Mannold (*voorzitter 2008*), Arjan (*voorzitter 2009*), Maaïke Wiltjer, Arjan van der Pal, Hedde van Hoorn, Reeuwert, Laurens-Jan, Jakko, Jasper(*voorzitter 2010*), Paul Huizinga, Thijs, Victor, Tobias and Edwin (*voorzitter 27e bestuur 2011*).

Verder wil ik de familie Bekker (Hendrik, Henk, Bert en Ymie) hartelijk bedanken voor hun belangstelling tijdens mijn academische traject en de discussies. In het bijzonder wil ik Hendrik bedanken voor de verschillende activiteiten o.a. practicum projecten op school, sportgelegenheid op de ACLO, avontuurlijke reis in Afrika (beklimmen van de *Mount Cameroon*, zoektocht naar nijlpaarden in *Benue* rivier, onvergetelijke ontmoeting met 1500 olifanten in *Waza...*).

Ik wil Gerda en Bert Boekhold hartelijk bedanken voor de aanmoediging in moeilijke en onzekere tijden voorgaande de aanvang van mijn academische opleiding, voor hun interesse in en betrokkenheid bij de voortgang van mijn promotieonderzoek. Grietje en Bert, Rika en Cyril voor de belangstelling en motivatie.

Ik wil Janny en Tjeerd hartelijk bedanken voor hun openheid en interesse. Verder ik wil Martin, Roos, Edwin en Monica bedanken voor hun belangstelling en de gezellige discussies.

J'ai une pensée particulière pour ma famille, sans oublier mama Rebecca<sup>†</sup>, papa P. Detsi, mama Rose, papa Lucas<sup>†</sup> et tonton Ebeni pour votre soutien moral.

Lieve Selma, ergens aan het begin van deze dankwoorden verheug ik me dat de Materiaalkunde groep van de Technische Natuurkunde mijn tweede huis is geworden. Helaas was ik regelmatig niet in staat om de juiste balans te vinden tussen werk en gezin. Daarom wil ik je heel erg bedanken voor je geduld, begrip en flexibiliteit. Verder wil ik je ook bedanken voor je directe betrokkenheid bij mij promotieonderzoek, vooral het nakijken van mijn presentaties, het ontwerpen van mijn posters, de mooie cover van dit proefschrift en de covers voor wetenschappelijke tijdschriften. Mijn leven is enorm verrijkt met de geboorte van onze dochter Nadine Rebecca. Elke keer als ik thuiskom word ik weer verblijd door haar enorme opgewektheid en door haar vertederende glimlach.

Eric
